CSC 235: Web and Database Development

Unfortunately, I was not able to connect to our CSC 235 server I don't know why, I think it's because of a password issue. However, I did something related to this before so I know I could get it done. I need help connecting to the sql server, then I can find a way to make PHP and SQL work together so the database can actually show up on the HTML webpage instead of just the SQL example I shown.
