CSC 235: Web and Database Development

This assignment kind of left me wondering some stuff. I'm a little lost on implementing our server with submitting a form and saving it on the server. I think we should go over it in class how to connect our server to the other end of a form. I got it to work using JavaScript, but I think it's only client-sided. Once again, not too difficult, but I wish I could of done more!
